27.6 Text: ERD Reminder = Entity Relationship Diagrams

PK = primary key = a col has a unique value for every row ~ id PK is usually the first column in our table.

Foreign Key - FK = a column in one table that is a primary key in a different table >> region_id
the foreign key is when the primary key appears in another table, account_id
but it doesn't need to be unique. sales_rep_id

Parch & Posey database
